

# Query Manager

The Integra Query Manager and Report Writer allows authorized users to create, store and execute user defined queries and print Reports from any data within the Integra Database.

The Query Manager allows Viewing query results, Printing query result via the Report Writer and Exporting data to Excel Spreadsheets and other popular file formats.

## Overview

The Integra Query Manager is an ANSI SQL-92 Compliant query facility for managing user-defined queries. With the Query Managers integrated Treeview you can Create, Edit, Save, Organize and Execute queries in an on-demand environment. Extensive User-Level security allows flexibility in which queries results are available to whom.

Powerful "Data Selector" technology has been incorporated into the Query Managers "Integra-SQL" by extending the SQL Language syntax to support pre-query data selection forms that drive how data is extracted for your query. These Data Selector components simplify the extraction process and eliminate complex technical SQL Join & Where clauses making data extraction criteria readily available with a point and click interface.

Integra's "Smart Mapping" technology automatically provides secure database access for appropriate corporations and in conjunction with Integra's internal master file sharing scenarios, makes shared data retrieval seamless. Integra's proprietary Query Scripting feature allows for virtually unlimited data retrieval and data analysis possibilities.

The Query Managers Viewer incorporates an export to file capability for your query results and directly connects to the Query Manager Report Writer. Alternate file export formats include: Excel Spreadsheet, Database File and Comma Separated Value (CSV). Your data is then useable immediately using a variety of 3rd Party tools. With the Export to Excel option for example, each column of your query is parsed into spreadsheet columns with appropriate column headers for use in sorting, totaling, graphing, formulas, etc.

## Features & Benefits

Integrated Data Dictionary

Query Results Viewer

Query Report Writer

Query Export Feature

Powerful Query Scripting

Save and Execute Queries

Query Organizer Treeview

User Level Security

ANSI Compliant SQL

The screenshot displays the Query Manager interface. The top window shows the 'Query Manager' window with a tree view on the left and a 'Query Title' field containing 'Direct Income Division Orders'. Below this, a 'View Direct Income Division Orders' window shows a table of query results. A blue arrow points from the 'View Direct Income Division Orders' window to a report preview window below it.
